

## HTTP CUSTOM TUTORIAL

### UNLIMITED DATA

At **SKY NET**, we provide config files and activator files designed to work with various VPN apps such as **HTTP Custom**, **HA Tunnel**, and **HTTP Injector**. These tools can help you bypass restrictions and enjoy free internet data by creating secure tunnels through VPNs or SSH connections. In this tutorial, we'll guide you through using an activator file with **HTTP Custom** to access free data.

To get started, you'll need to install these from the Google Play Store

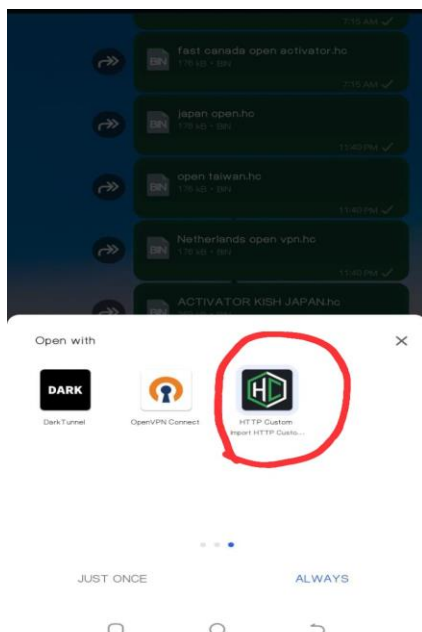

#### Download

1. **HTTP Custom**
2. **Psiphon Pro App**

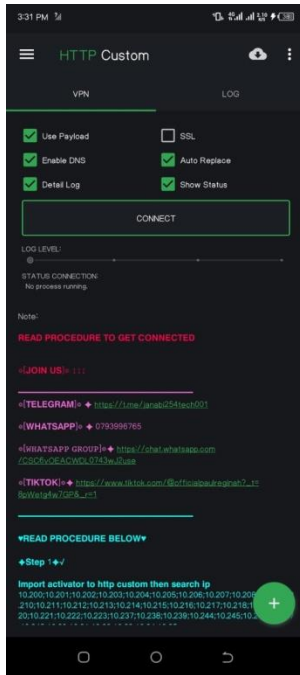

#### STEP 1

**Click the activator file** to import it into HTTP Custom. This file contains the pre-configured settings that allow you to bypass data restrictions.

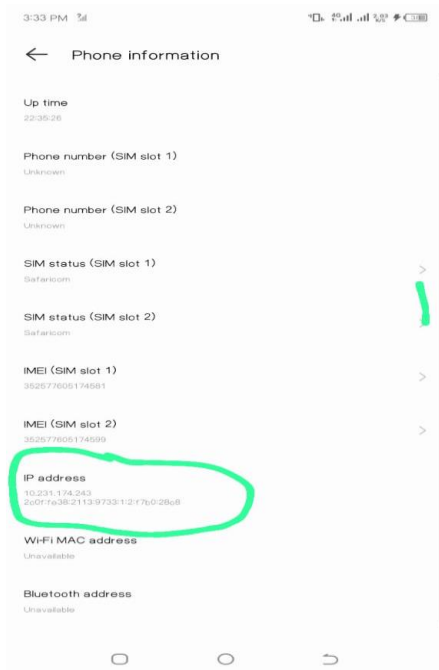

## STEP 2

Open the file using Http Custom

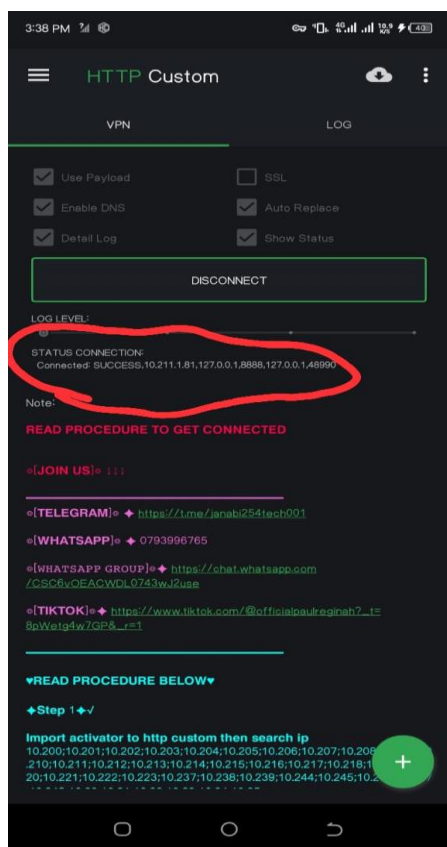

## STEP 4

Do not connect immediately.

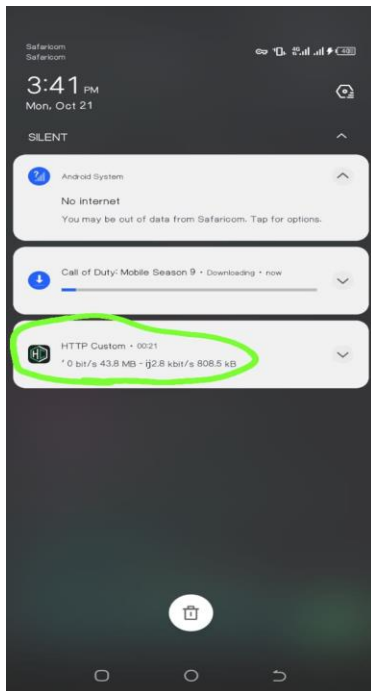

**STEP 5**

- **Open Settings:** Tap the gear icon in your app drawer.
- **About Phone:** Scroll down and select "About phone."
- **Status:** Look for "Status" or "Network" (this may vary by device).
- **IP Address:** In the status menu, you may find the mobile data IP address listed under "IP address" or similar. If it's not visible here, you may need to check it while connected to a mobile
- Turn on and off flight mode till required IP is found.

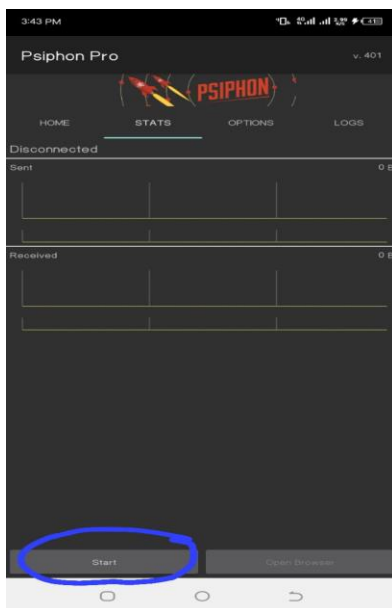

**STEP 6**

Get back to Http Custom app and click connect.

## **STEP 7**

You will be awarded the first 45mbs which you will have to exhaust in order to continue with the rest of the process, just download anything that requires more than 45mbs, in this case **COD**

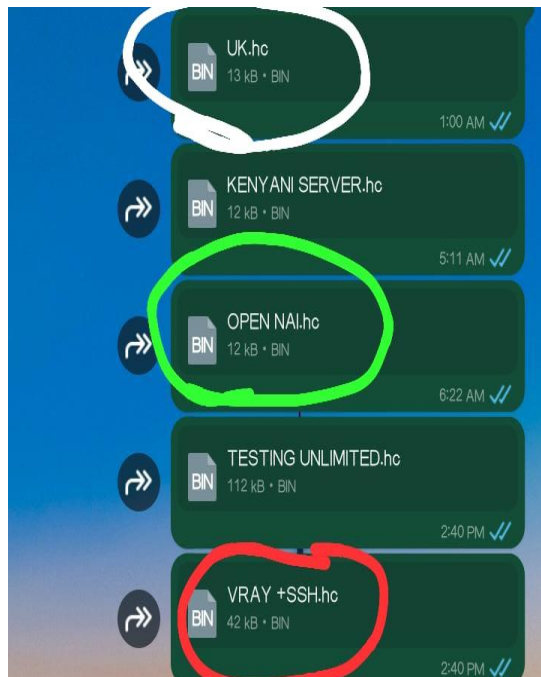

## **STEP 8**

Start Psiphon Pro App

## **STEP 9**

Exhaust another 20mbs given by psiphon pro app

## **STEP 10**

Use the file given to you by SKY NET now, open using Http Custom, and connect to use unlimited data
